

The most information in a single location

PropertyPoint™

Instead of searching by state, zip code or city, Windermere's PropertyPoint™ mapping tool lets you click and zoom to your desired location and gives you a bird's-eye view of a specific region, neighborhood, or even a single block in your favorite neighborhoods. Simply enter your desired listing characteristics such as price, number of bedrooms, number of bathrooms and other features, and all of the listings that match your criteria are mapped right alongside streets and other visual landmarks.

Property Point features Google™ maps, the standard in mapping software, and allows you to compare the proximity of a home to landmarks such as streets, major arterials, schools, parks and work—much like you do in your own car.

As you mouse over the mapped listing icons, Property Point gives you instant access to information about each property including multiple photos—all on a single screen. When you see a listing you like, click the "Clip It!" link and that listing is saved. You can move on to review other homes that match your needs. When you're ready to print your favorite properties, click the "Clippings" link at the top of the page and Property Point creates a flyer for each listing—all in one easy-to-print document.

Go to Windermere.com to take a virtual drive through the neighborhood today with Property Point—right from the comfort of your own home.
